

FOI 3628

4th March 2026

FREEDOM OF INFORMATION ACT 2000 – INFORMATION REQUEST

Manufacturer and model of all endoscopic imaging systems and video endoscopes in use within the trust.

Location within trust (hospital site)

Age of each unit in situ (date of manufacture or date of installation)

Response:

Please see attached document for response.

Please note the equipment management system used within the SHSCT does not list 'Endoscopic Systems'. A 'system' typically consists of interchangeable components e.g. light source, video processor, insufflator, monitor etc. Information provided is as listed on our asset database.

Associated planned replacement programmes or supplier contracts in place.

Response:

Typically the trust does not use a planned replacement process as there are insufficient funds available to meet the demand. Users will request funding to replace devices normally when approaching end of life and these bids are considered alongside other requests for medical devices. Medical Equipment is usually purchased either from local BSO PaLS frameworks or from the national NHS Supply chain framework.
