

FOI 3829

23rd July 2026

For the last year where you have a full year's data, please can you tell me the following for hospitals that fall under your jurisdiction:

How many Maternity patients were treated for Gestational Diabetes Mellitus (GDM) in the 12 month period?

Response:

It is not possible to accurately identify the number of women treated for GDM. Patients with GDM are typically managed within joint Obstetric and Diabetic clinics, which also provide care for women with Type 1 and Type 2 diabetes. As the clinic activity data does not distinguish between these patient groups, GDM cases cannot be isolated from the wider clinic dataset. Therefore, it is not possible to provide an accurate figure for the number of women treated for GDM.

Do you have a digital product to support the treatment of patients with GDM?

Response:

Information not held

If you have a digital product, can you supply the total contract value and duration?

Response:

Information not held

How many type 1 diabetes patients (all adults & paediatrics) do you care for in your hospitals?

Response:

There have been 33 patients admitted to paediatrics in 2025 due to type 1 diabetes.

The numbers of outpatients attending Paediatric Clinics between 01/06/2025 to 31/05/2026:

Number of Visits to specific clinics* in SHSCT by month of Visit Visit Date between 01.06.2025 - 31.05.2026													
	June	July	August	September	October	November	December	January	February	March	April	May	Total
No of Visits	106	96	100	119	102	106	90	89	101	123	93	107	1232

Information not held for adults - as the Type 1 Diabetes patients attend all different clinics, adult patients with Type 1 diabetes cannot all be captured and therefore this part of the request cannot be answered.

How many type 2 diabetes patients (all adults & paediatrics) specifically on insulin do you care for in your hospitals?

Response:

There have been no patients admitted to paediatrics with type 2 diabetes
Information not held for adults.
