

**Having your oxygen  
saturation levels  
checked**

## Blood

Our blood has lots of things in it to keep us fit and healthy. One of these things is oxygen.

Your arteries and veins carry this oxygen around your body in your blood. Oxygen keeps your body working.

Doctors and nurses can measure how much oxygen is in your blood by using a pulse oximeter. This is a pulse oximeter.

The Doctor or nurse will put the pulse oximeter onto your fingertip.

This will not hurt.

It will only take 1-2 minutes to check your oxygen levels.

The doctor or nurse will talk to you about the results from the pulse oximeter.
