- l) Is there an accompanying consulting support contract for this system? - Yes/No**
- m) If yes, please provide the consulting firm's name -**
- n) Consulting contract start date -**
- o) Consulting contract end date -**

Please provide your answer in the above format for each system.

System definitions:

BI & Data Warehousing: Integrates data and information collected from various sources, e.g. electronic patient/health records, enterprise resource planning systems, radiology and lab databases, wearables etc, into one comprehensive database

Discharge Letters: The ability to electronically generate and send detailed discharge letters to GPs and other relevant HCPs, when a patient is discharged from hospital-based services.

Integration Platform: Software that supports the integration and interoperability of various clinical and management IT systems and services.

Maternity: It is the specialist maternity system in use for maternity care.

Secondary Care EPS: Advanced e-prescribing in use across wards for outpatient care, incorporating specialist prescribing and (ideally) clinical decision support,

integrated as part of end-to-end medicines management. This possibly offers the single biggest opportunity for improving patient safety through digitalisation.

Voice recognition: Identifies and translates spoken words into text. Used to complete tasks or transcribe documents.

Response:

Please see attached.
